High Intensity, Low Smoke Colors for PVDF

Breen's Colors for PVDF

- Strong colors are far brighter than conventional, washed out PVDF colors
- Low smoke and outstanding heat properties allows to you make product to the toughest standards
- Available productivity enhancers can increase your throughput up to 30% – with *no effect* on smoke or heat properties

Low smoke, high productivity, strong color

Many of our customers have asked for intense colors for polyvinylidene fluoride (PVDF) for demanding applications.

Now, thanks to extensive research and development, Breen Color Concentrates offers you not just a wide range of deep, vibrant colors—but enhanced productivity and low-smoke properties as well!

In addition, Breen colors for PVDF are free of heavy metals, helping you to meet environmental and regulatory specifications.

The full range of Munsell colors is available standard, and as always, custom color matching can

be done quickly by Breen color masters.

Testing by Underwriters Laboratories Inc. shows exceptional heat release performance, as well as low smoke generation under standard testing. Peak heat release for some colors is 13% to 50% of that of competitors.

The result is a color series ideal for such tough applications as plenum cable, aerospace, and other heat- and smoke-sensitive uses.

PVDF Colors from Breen are strong, vibrant

Productivity Enhancers

Also available are productivity enhancers that can help you increase throughput by up to 30%, *without affecting smoke or heat values.*

Breen colors for PVDF were co-developed by Breen and Solvay Fluoropolymers.

You benefit from Breen's strengths

With more than 25 years in color formulation, Breen Color Concentrates has kept on the forefront of color and pigment development

Breen's formulation experience draws on extensive knowledge of pigment, resin and additive properties, and the team behind our PVDF colors is second to none.

Feel free to tap this expertise for custom color concentrates to meet any special requirement.
